

[Wave Sounds]

Our planet is covered in water. From rocky coastlines to sandy seashores, Earth is over 70% water. Coastal habitats, like coral reefs and kelp beds, contain over 90% of all marine life. That being said, less than 1% of all Americans are certified scuba divers! Learning to dive gives you access to the underwater world in a way that most people can't understand. Share a moment with the wacky, the weird, and the wonderful, the dangerous and the delicate, the curious and the cautious, the predator and the prey, or the serene and the strange.

Diving takes place all over the world in all kinds of environments and temperatures- dive a historic shipwreck in Japan, swim-throughs and cenotes Mexico, or see soft corals in Fiji. When you're a diver, the world is yours!

Welcome to the 1%- your scuba journey starts here with learning the skills and information needed to dive safely. A big part of that is the gear that you will be using. This mini-course will introduce you to the gear that allows you to experience our incredible underwater world. Let's dive in!
